New KeyControl® Dashboard

InstaKey® Security Systems introduces a fresh new look SecurityRecords.com® Dashboard designed to simplify KeyControl® programs. This new enhancement allows Software Users the ability to quickly review and analyze their KeyControl® Program information in "real time".

At the top, a User will find the Show Reports, Open Orders, and Messages sections. The Show Report selection allows each User to select which Reports that they would like to view on their Dashboard; the Open Orders section displays what Orders are currently in the production queue, and the Messages section is utilized by InstaKey® Security Systems representatives to point out or identify SecurityRecords.com® software updates or notices.

The specific KeyControl® charting displays Rekeying Analysis, Locations Installed, Key Transitions, Current Key Step, and Order Analysis. Each chart reflects the aggregate KeyControl® information allowing Users the ability to quickly measure, drill down, and react to program non-compliance or exceptions. Each chart reflects a dynamic interface that links to detailed reporting. Each drill down report offers additional filter and sort capability allowing for simplistic data exporting and manipulation. As Client programs differ by necessity, we invite you to explore the new Dashboard and drill down reporting features within your own program.

We believe that through the addition of this visual display, KeyControl® becomes even simpler to manage.

For more information, please contact an InstaKey® Security Systems representative to learn how you can better manage your KeyControl®.
