Ground breaking 3 Year Warranty included standard with new WG Wi-Fi Systems.

Campbell, California: WG Security Products is pleased to announce an industry setting 3 Year Warranty, included on all new Wi-Fi enabled EAS Security Systems.

With WG's new EASNet Cloud application, Wi-Fi enabled EAS systems can be wirelessly accessed to monitor their operational status and adjusted accordingly without a technician being present. The Wi-Fi enabled antennas will allow for constant, remote monitoring of the customer's EAS system. WG is so confident in the increased performance and reliability of the new Wi-Fi enabled systems, coupled with remote wireless access, that we will gladly provide the extended the 3 Year Warranty to our customers.

There will no longer be the need for pricey, on-site technician visits for simple system adjustments. Phasing and tuning are two factors that largely contribute to service calls; the customer will be able to call into the WG Support Center and have their system diagnosed remotely, from anywhere in the world. System down time, in the event of a problem, is a large concern for the customer. With the installation of a new Wi-Fi enabled system, down time will be reduced to a fraction of the current time. The customer will not be rendered vulnerable to theft, while waiting for a service technician to arrive on site. In the event that a technician is required, this will also be covered by the 3 Year Warranty, unheard of in the EAS industry.

The new M24/7 product line of antennas provide improved system performance, reliability and support, which continue to be the focus of WG's world leadership in technology advancements.
