

CIS Security Solutions announces revolutionary FLUX alarming padlock system

Press Release

The FLUX Alarming Padlock System shown above, offers a variety of options to fit the security and customer service needs of retailers for almost any merchandise on display.

With replaceable batteries for the decoder and optional lengths for tether loops, the FLUX padlock can be a part of your LP program for years to come.

Hobe Sound, FL CIS Security Solutions , March 28, 2016

Our Flux Padlock Tag System is revolutionary. It offers many different levels of security for protecting merchandise. It's not just a padlock tag that alarms. With AM and RF EAS systems built in, it's much, much more. Our Flux Padlock Tag can also be attached to alarming pull boxes, including CIS SS's patented mousetraps. It gives your store personnel the ability to protect merchandise and still offer customers the best user experience with a secure product.

The Flux padlock system offers several advantages versus other products on the market. The system can be used as a stand-alone padlock or mated with a pull box.

FLUX 1.0 Multi-alarming Flux Padlock - Stand-alone alarming padlock

- It offers customized loop lengths to attach to almost any product
- If the loop is cut a 98 dB alarm sounds, alerting store personnel
- If the loop is removed with a magnet prior to deactivation, the alarm will sound
- If the merchandise leaves the store without the tag being removed, the EAS system will alarm – (both RF and AM systems)
- Uses the exclusive Flux Decoder to shut off alarm and release the tether
- Almost immediate ROI with replaceable batteries for both the Flux Tag and the Decoder.

FLUX 2.0 and 3.0 use the alarming padlock with the same features as the FLUX 1.0 but have the ability to mate with a pull box to offer added security and a deterrent to grab and run thieves.
