ZKAccess Releases The BioCam300: *The World's First HD IP Access Control Camera*

Fairfield, NJ . . . February, 2015 - ZKAccess, a leading provider of biometric and RFID solutions, is pleased to announce the release of its BioCam300. BioCam300 is a highly cost-effective and affordable HD IP access control camera which combines long-range facial recognition, video surveillance and time & attendance, all in a single device. It can operate stand-alone (no computer nor panel needed) for quick and easy installations requiring no special wiring, and can also be tied into any existing 3rd party access control panel having Wiegand input. BioCam300 embedded facial recognition technology unlocks a door once authorized users walk within 12 feet of its camera. Its built-in infrared illuminators ensure accurate face recognition, even in low-light conditions.

"Access Control is a very crowded, commoditized space these days. We find both distributors and installers are primarily challenged with preserving profit margins, differentiating their company, and reducing training time on new products," notes Larry Reed, CEO, ZKAccess. "BioCam300 addresses all these concerns since it's in limited distribution and there are no competing products. BioCam300 installs no differently than any traditional keypad or card-based access control system. It connects directly to the door lock or any 3rd party access control panel. BioCam300 also uses the same power and wiring as traditional systems," he adds. "The only difference with Biocam300 is its face reader, which takes all of 30 seconds to enroll users and operate, so there's practically no learning curve at all."

In addition to providing 100% hands-free door access, other features of the BioCam300 include: ONVIF compliant camera; 400 face capacity, 100,000 transactions storage capacity; Fast throughput with 1 - 2 seconds verification time; Dual HD CMOS cameras with audio output and alarm output; 7" LCD display incorporated with the HD IP camera; Access control with built-in relays for door locks and inputs for REX; and HD IP video recording which can be stored on either a 32GB SD Card or external NVR.

This latest offering from ZKAccess represents an exciting new security product category - long-range face recognition and access control, combined in a single device. BioCam300 affordably addresses business and security applications for system integrators of all sizes and skill levels.
